

Eyes on Monitor \$EOM

Whitepaper

The World's Signal — Curated Daily for Humans and AI Agents

A fixed-supply community meme token powering a real-time global narrative intelligence platform.

Important Notice! Please Read Before Proceeding!

This whitepaper is published for informational and entertainment purposes only. Eyes on Monitor (\$EOM) is a community meme token. It is not a security, share, bond, unit in a collective investment scheme, commodity, or regulated financial instrument of any kind. It does not represent equity, ownership, debt, dividends, revenue participation, governance rights, or any guaranteed utility of any kind against the Eyes on Monitor project or any associated entity.

Nothing in this document constitutes financial, investment, legal, tax, or regulatory advice. Do not treat any statement herein as a promise, guarantee, or commitment regarding future value, utility, or performance. Digital assets and meme tokens are highly speculative. Their value can decrease to zero. You may lose the entirety of any value associated with your participation.

By reading or acting on any part of this document you acknowledge that: (1) you have conducted your own independent research; (2) you understand the high-risk nature of meme tokens; (3) you participate voluntarily with funds you can afford to lose entirely; (4) you are not a citizen or resident of any jurisdiction where participation in token projects of this nature is restricted or prohibited.

Tokenomics, vesting schedules, allocation percentages, launch mechanics, wallet addresses, community programs, and all other parameters described herein are subject to change before or after launch. The deployed smart contract and its publicly verifiable on-chain state shall serve as the definitive source of truth.

Eyes on Monitor does not engage in, endorse, or condone market manipulation, wash trading, undisclosed paid promotion, misleading marketing, or hidden insider token dumping. All team and treasury allocations are subject to transparent on-chain vesting with publicly announced wallet addresses.

\$EOM is not financial, political, or medical advice. For informational and entertainment purposes only. DYOR. We keep calm. We monitor.

1.

Introduction

The Problem: Information Overload in the Age of AI

We live in an era of information abundance and signal scarcity. Every day, hundreds of thousands of news articles, social posts, analyst reports, and broadcast segments are published across every language and region. Humans cannot read all of it, people are overwhelmed by volume. Important developments are buried inside endless streams of commentary, repetition, speculation, advertising, and algorithmically amplified noise.

Traditional news aggregators tend to surface what is loudest, newest, or best distributed — not necessarily what is most important. Social feeds optimise for engagement, outrage, and attention, not truth, context, or relevance. The result: a world drowning in noise, struggling to identify what actually matters.

This problem is about to become significantly more acute. The next generation of AI agents — autonomous systems that act on behalf of individuals, institutions, and other machines — require reliable, structured, evidence-backed information to make sound decisions. An AI agent that acts on misleading or incomplete news is dangerous. An AI agent with access to a clean, verified, globally-representative signal of what the world is focused on today is genuinely powerful.

The Eyes on Monitor Solution

Eyes on Monitor is built for this future. The Eyes on Monitor AI platform scans over 100,000 global media sources every single day — news outlets, wire services, blogs, social platforms, official statements, and broadcast media — across dozens of languages and regions. It applies sentiment analysis, semantic understanding, and topic clustering to determine not just what is being said, but whether separate articles are discussing the same underlying event or genuinely different topics.

From this daily corpus, Eyes on Monitor distils a Top 10 list of the most globally significant topics — the narratives commanding the broadest and deepest media attention at that moment. Crucially, every entry is backed by direct links to original source material, providing verifiable proof that the signal is real, widespread, and not manufactured.

Eyes on Monitor does not editorialize. It does not promote an agenda. It reduces noise and returns signal — what actually matters to the world right now, with the receipts to prove it.

Built for the AI Agent Era

Eyes on Monitor is designed for humans to reduce the noise for them and provide in a simple way the most important information daily, and at the same time it is designed to serve the next generation of AI news agents and autonomous AI systems that increasingly need grounded, source-backed information about the real world.

When an AI agent needs to know what topics dominated global attention on a given day with proof — Eyes on Monitor provides exactly that structured, verifiable intelligence layer.

The \$EOM Token

\$EOM (Eyes on Monitor) is the community token associated with this platform. It exists to build, grow, and sustain the community of people who believe that clean, verified, globally-representative information is one of the most valuable assets in the AI era. The token does not create the platform's value; the platform's value creates the context in which the token community thrives.

The tokenomics are deliberately simple: fixed supply, no presale, no buy or sell tax, no future minting. Public liquidity. Transparent vesting. Monthly community participation rewards. The goal is a token structure that is easy to understand, hard to manipulate, and aligned with long-term community growth.

2.

How Eyes on Monitor Works

The Eyes on Monitor intelligence pipeline operates in four stages running continuously every day:

Stage 1 — Ingestion

Eyes on Monitor's crawler and API layer collects content from over 100,000 global media sources daily — news wires, regional outlets, social platforms, official feeds, and broadcast transcripts across dozens of languages.

Stage 2 — Analysis

Each piece of content is processed through sentiment analysis (positive / negative / neutral / alarmed), semantic embedding (what is this actually about?), and entity recognition (who and what is referenced).

Stage 3 — Clustering

Semantically similar articles are grouped into topic clusters — so 200 articles about the same geopolitical event are recognised as one signal, not 200 independent data points. This eliminates duplication and correctly identifies whether topics are the same or merely superficially related.

Stage 4 — Surface & Prove

The Top 10 clusters by global attention volume are surfaced daily, ranked by breadth of coverage. Each topic is accompanied by direct links to original source articles — verifiable proof that the signal is real and widespread, not synthetic.

The output is clean, structured, source-backed narrative intelligence — 100,000 daily data points reduced to the 10 things that matter today, with proof. Accessible to humans via the web app and Telegram bot, and increasingly to AI agents via structured data feeds.

3.

Token Details

Item	Detail
Token Name	Eyes on Monitor
Token Symbol	\$EOM
Total Supply	42,000,000 EOM
Token Type	Fixed-supply community meme token
Buy / Sell Tax	0% / 0%
Presale	No presale
Future Minting	Disabled — no future minting possible
Contract (CA)	eomHLbgKjnNnDYF5MiSTbw93AxTLzp1DEtPLQDdt6kf

42,000,000 tokens. Fixed. Forever. The total supply is set at launch and cannot be increased. There is no admin key, no mint function, and no mechanism for any party, including the founding team, to create additional \$EOM tokens.

4.

Token Allocation

Pool	%	Tokens (\$EOM)	Purpose
Liquidity	60%	25,200,000	Launch liquidity and public trading depth
Community	15%	6,300,000	Monthly rewards for eligible community participants
Team	15%	6,300,000	Long-term team and contributor incentives, vested
Growth & Development	10%	4,200,000	Development, operations, marketing, partnerships, listings
Total	100%	42,000,000	

The allocation is front-weighted toward public liquidity. With 60% of all tokens going directly to liquidity pools, Eyes on Monitor launches with deep, accessible, community-owned trading depth. This structure minimises insider-driven price manipulation risk and ensures the token is genuinely tradeable from day one.

The Community pool (15%) rewards real participation over 42 months. The Team pool (15%) is fully vested with a cliff and has zero tokens accessible at launch. The Growth & Development pool (10%) is released gradually to fund real operations, with only 5% accessible at launch.

5.

Vesting & Unlock Schedule

Pool	Unlock Amount	Schedule
Liquidity	25,200,000 at launch	Used for launch liquidity. LP tokens locked or burned where possible.
Community	150,000 per month	Equal monthly unlock over 42 months from launch day.
Team	0 at launch. 157,500 per month from Month 3	2-month cliff, then 40-month linear vesting. Fully vested at Month 42.
Growth & Development	210,000 at launch. 210,000 in Month 2. 94,500 per month from Month 3	5% at launch, 5% in Month 2, remaining 90% linearly over 40 months. Fully unlocked at Month 42.

The vesting structure is designed so that no party — team, treasury, or otherwise — can exert sudden, large-scale sell pressure in the early months. The two-month team cliff prevents any founder or contributor from accessing tokens before the community and liquidity are established. Linear vesting over 40 months thereafter aligns all team incentives with long-term token health.

6.

Community Rewards

The Community Pool unlocks 150,000 \$EOM every month for 42 months. Each month, the full monthly unlock is shared equally among all wallets that qualify. The reward per wallet is variable — determined entirely by how many wallets participate.

$$\text{Monthly reward per wallet} = 150,000 \text{ \$EOM} / \text{number of qualified wallets that month}$$

Eyes on Monitor is designed as a new-era media meme token. In today's market, attention moves through media: posts, reposts, memes, links, screenshots, comments, and community sharing. For that reason, Eyes on Monitor keeps community contribution simple. The Community Rewards system is focused on the actions that actually spread media: following the official Eyes on Monitor X account, reposting official Eyes on Monitor content, and submitting a proof link.

Eyes on Monitor does not require complex tasks or complicated participation rules. The goal is to reward simple, visible, media-based community activity. Every month, qualified community members share the unlocked Community Pool equally, based on verified participation.

Qualification Requirements

Requirement	Rule
Follow on X	Must follow the official Eyes on Monitor X account (@eyesonmonitor)
Monthly Repost	Must repost the official monthly Eyes on Monitor campaign post
Submit Proof	Must submit the X repost link through the claim portal
One Per Wallet	Each wallet and X account can qualify once per month
Account Age	X account must be older than 30 days at snapshot time
Repost Live	Repost must remain live until the monthly snapshot is taken
Minimum Balance	Months 1–2: No minimum \$EOM balance required. Month 3 onward: Each participating wallet must hold at least 42 \$EOM or \$2 equivalent of \$EOM, whichever is greater, at the time of the monthly snapshot.

These requirements reward genuine, sustained community participation — not bot networks or wallet farms. The 30-day account age filter, combined with the monthly repost and proof submission requirements, creates a meaningful but accessible participation bar. The minimum balance requirement from Month 3 ensures reward recipients have skin in the game.

7.

Growth & Development Treasury

The Growth & Development Pool (4,200,000 \$EOM / 10% of total supply) is the project's operating treasury. It funds the real work that sustains and expands the Eyes on Monitor platform and community.

Treasury may be used for:

- Platform development — backend infrastructure, crawler expansion, AI model improvements
- Website, claim portal, and tooling
- Marketing campaigns
- Exchange listing fees and liquidity support
- Community operations, moderation, and ambassador programs
- Analytics, data infrastructure, and API development for AI agent integrations

The Growth & Development wallet will be public and verifiable on-chain. Only 5% of the pool is accessible at launch (210,000 \$EOM), a further 5% in Month 2 (210,000 \$EOM), and the remaining 90% unlocks linearly over 40 months.

8.

Team Vesting

The Team Pool (6,300,000 \$EOM / 15% of total supply) is reserved for founders, core contributors, developers, designers, community moderators, and long-term project builders.

No Team tokens are accessible at launch or during the first two months. Beginning in Month 3, the pool vests linearly at 157,500 \$EOM per month until Month 42, at which point the pool is fully vested.

9.

Launch Principles

Eyes on Monitor is designed around a set of simple, non-negotiable public principles. These are structural constraints baked into the tokenomics, not aspirational statements:

No Presale: Tokens are not sold privately before launch. No private round, no seed allocation, no VC-only distribution.

No Tax: 0% buy tax, 0% sell tax. Every transaction is clean.

Fixed Supply: 42,000,000 \$EOM. Minting is disabled and cannot be re-enabled.

Public Liquidity: 60% of supply goes directly to public liquidity pools at launch.

Public Wallets: Team, treasury, and liquidity wallet addresses are publicly disclosed and verifiable on-chain.

Transparent Vesting: All vesting schedules are pre-programmed in smart contracts, not discretionary.

Simple Rewards: Monthly community participation rewards with clear, simple eligibility criteria.

No Complicated Promises: Eyes on Monitor does not promise price targets, exchange listings on specific dates, or guaranteed utility. The token is a community meme token — the platform is real.

10.

On-Chain Addresses

All token allocations, wallet addresses, and pool contracts are publicly verifiable on Solana. The addresses below are the definitive on-chain source of truth for \$EOM token distribution.

Label	Address
Network	Solana
Token Contract (CA)	eomHLbgKjnNnDYF5MiSTbw93AxTLzp1DEtPLQDdt6kf
Raydium LP Pool	3i3RuoFNwv2j839FVKNeJbdvhFkJCL9RwGeeGmacb3M
Team Wallet	eoTMaNN8DfFQKQnJRaMZUtp6s6xGVBcni99GTDGCUmB
Community Wallet	eoCTPEsDTSJ91VWHDKBnacpsC7m3fPtSmAgTPAdkmi6
Growth & Dev Wallet	eoGnxG6a7rBjjSMhHSgkUNgjRk1ETjbGhTadL5uUVM9

Full Disclaimer

Nature of \$EOM

\$EOM (Eyes on Monitor) is a community meme token issued on a public blockchain. It is not a security, share, bond, unit in a collective investment scheme, commodity, or regulated financial instrument of any kind in any jurisdiction. It does not represent equity ownership, debt obligation, revenue participation, profit sharing, governance rights, or any other financial claim against the Eyes on Monitor project, its founders, contributors, or any associated entity.

No Financial Advice

Nothing in this whitepaper or any associated Eyes on Monitor communications constitutes financial, investment, legal, tax, accounting, or regulatory advice. The Eyes on Monitor project does not have a licensed financial advisor relationship with any participant. All information is provided for general informational and entertainment purposes only. Consult qualified professional advisors before making any financial decisions.

Risk Acknowledgment

Digital assets and meme tokens are highly speculative instruments. Their value can decrease to zero. Past performance of any digital asset is not indicative of future results. Participants may lose the entirety of any value associated with their participation. Blockchain transactions are generally irreversible. The Eyes on Monitor project makes no representation or warranty regarding the future price, liquidity, exchange availability, or market capitalisation of \$EOM tokens.

Forward-Looking Statements

This whitepaper does not include any forward-looking statements, including but not limited to roadmap timelines, platform development commitments, partnership intentions, exchange listing expectations, revenue projections, or future performance claims.

Regulatory Status

The regulatory status of digital assets and token projects varies significantly across jurisdictions and is subject to ongoing change. It is the sole responsibility of each participant to determine whether and how local laws and regulations apply to their participation. Residents or citizens of jurisdictions where participation in token projects is restricted or prohibited should not participate.

Platform Independence

The Eyes on Monitor AI platform (eyesonmonitor.com) is a real, independently operating information aggregation and narrative intelligence service. The platform operates independently of the token and its continuation is not contingent on the token's market performance. The platform does not provide financial, political, or medical advice. All platform outputs are for informational purposes only.
